## October 2012 Cekamon Saws Newsletter

This newsletter includes i.e.:

- Tabletop up or down?
- Talking about pallets
- An interference with teeth

### >> Customized display for PalletSaw

Cekamon Saws delivers custom made solutions. A customer approached us for his visually disabled employee. We saw opportunities. The employee is now working with an extra large screen (22 inches) and a wide-angle camera. Working with the PalletSaw is now a lot easier and safer for him. But not only the customer and employee is happy with this solution. We are also enthusiastic. Therefore, the extra large display and wide-angle camera can be ordered by everyone. In this way we constantly develop our product.

### >> Redesigned hydraulics PalletSaw VCH

The [PalletSaw VCH](#) is a smaller version of our [PalletSaw type W](#). This stripping machine is 440 pounds lighter than Type W and has a different frame. We improved the hydraulics of the VCH now. As a result the height adjustment of the table now works even better.

### >> An interference with teeth

We hope that it happens rarely. But sometimes a machine doesn't work usual or there is an interference. Recently a customer called us about his PalletSaw. It did not work anymore. After our technician searched for the possible causes, he stumbled across an unusual problem. A rodent had put his teeth in the cables of the PalletSaw. After replacing the cables, the PalletSaw worked normal again.

### **>>Talking about pallets**

In October the European Federation of Manufacturers of wooden pallets and packaging (FEFPEB) receives a large number of participants at the European Congress in Valencia. The conference lasts three days and takes place for the 63rd time. All fourteen country members are represented. They visit various Spanish companies during the conference and discuss current events in the industry.

### **>> TIP: tabletop not up or down?**

You expand, you move or reorganize. There are many reasons why you want to replace your PalletSaw. After replacing, try the PalletSaw before using it again. If the tabletop height adjustment doesn't work properly, the phases in your wall plug may not be properly connected. In this case please contact Cekamon Saws.

### **Request for information**

If you want to start saving thousands of Pounds a year in pallet costs and pallet wood purchases, contact us for a tailor-made offer!
