February 2012
Cekamon Saws Newsletter

The first weeks of 2012 already passed. This year we will develop solutions for the recycling of pallets. In this newsletter you can read more about automating workprocesses, tips for working with the PalletSaw and a repairline we installed at Team Paletten Logistik.

In this newsletter:

- For Sale: palletline
- Get te most from your PalletSaw
- Automatic board grinder
- Repairing without a licence
- Full automatic pallet control
- Practical case: Team Paletten Logistik

>> Practical case: Team Paletten Logistik

December 2011 we delivered an europallet repair line for three employees to Team Paletten Logistik, Belrode (D). We placed this line at their branche in Erfurt.

The employees of TPL are performing optimal with minimum fysical strain. The whole line is placed at 80 cm height, the ideal working height. With this line the production raised with 30%.

- The employee at the saw gets the pallet with the help of the tipper.
- With the Cekamon PalletSaw he removes the broken parts of the pallet.
- Two employees repair the broken pallets.
- After repairing them they slide the pallet with a simple movement away. A stacker neatly stacks the pallets.
- The stacker has a licence nailgun which fullautomatic hits a Epal licence nail in the middle block of the pallet.

>>Full automatic pallet control

In our latest newsletter you could read about our automatic controle unit. [Click here to read this article.](#) We optimized this system. The result has surprised us positively. Do you want to see this with you own eyes? Call us for an appointment.

>> Repairing EUR/Epal pallets only with a licence

Recently Epal won a case for the Dutch court. It was a case against a palletcompany that repairs Epal-pallets without a licence of Epal.

>> Continue automating

Automatic work processes makes work saver, less hard and quicker. We work on an automatic system for the removal of broken pallet parts. The first test has been succesful. In this newsletter we keep you informed about the development.

>> Automatic board grinder

On this moment we're working on an automatic board grinder. This machine automatic mills a profile at the bottom boards of a pallet. You can expect more information about this the coming months.

>> Get the most from your PalletSaw

You use your PalletSaw every day. Bud do you get the best resultst?

- Make sure the tabletop is leveled.
- Your band saw will wear out faster when the sawguides are not at the right place and if it isn't positioned in the middle of the saw wheel.
- Did you know that your PalletSaw can always be expended with additional options. One of our costumers (Thomas Lembke Palettenhandel) ordered the ball bearing rollers. He placed them at his PalletSaw (Year: 2005). His employees are very exited. Lembke advices us never to sell a PalletSaw without the ball bearing rollers again.

**Thomas Lembke
Palettenhandel:**
**Never sell a PalletSaw
without the ball bearing
rolls again.**

Do you want to make working with the PalletSaw easier and lighter? Please contact us.
