## **Cekamon Saws Newsletter**

Cekamon Saws offers tailor-made solutions for the sorting, repair and dismantling of your pallets. We are constantly searching for new possibilities to make your work more efficient and safer. This newsletter tells you how you can improve your working conditions and how to increase your production.

### **In this newsletter:**

- >> Modifications for PalletSaw
- >> Prices of pallet wood risen sharply: seize the opportunity!
- >> Practical case: Increased production thanks to Cekamon Saws

### **>> Practical case: Increased production thanks to Cekamon Saws**

Last month, we installed an extremely fast sorting and repair line at an Austrian company. This considerably improves the working conditions and increases productivity. That's why they opted for this tailor-made solution of Cekamon Saws.

An overview of the benefits of this sorting and repair line:

- only one employee is needed for monitoring
- the employee does not have to lift anything
- the number of sorted pallets may run up to 450 per hour
- pallets are immediately sprayed after having them repaired

An example of an effective solution developed by Cekamon Saws.

Do you want to find out more about this line or what Cekamon Saws can do for you? Please feel free to [contact](#) us.

### **>> Prices of pallet wood risen sharply**

You may have noticed that the prices for pallet wood has risen sharply. This may well be the perfect moment to consider recycling your obsolescent stock. For example, the wood of pallets that have been dismantled with the PalletSaw is approximately 50% cheaper than new wood. Apart from the well-known PalletSaw, Cekamon Saws has plenty of other options to save costs when recycling pallet wood.

### **>> Modifications for your Cekamon PalletSaw**

We continuously aim to optimise our products for you. In collaboration with the Health & Safety Inspectorate, we developed a number of modifications that considerably improve safety and facilitate the job. These expansion options can also be applied to your existing PalletSaw.

- **Ball bearing rollers**

Rolling is better than pushing. Your employees do not have to push the pallets. Instead, they can simply roll them over the table. We can place these ball bearing rollers in your existing PalletSaw.

- **Extended protective cover**

Improve working conditions by placing this extended protective cover. The current red bracket comes off easily, which may lead to dangerous situations. You can place the extended protective cover yourself, and it will prevent your employees from being exposed to the band saw.

- **Protective wire for lights**

In order to protect the lights of your PalletSaw against flying pieces of wood, we have developed a wire construction, which is easily placed around your existing lights.

## >> Future activities Cekamon Saws

You may have noticed our absence from the Wood trade fair held in Rotterdam this month. However, we are participating at the LIGNA Hannover in May 2011.

### Request for information

If you want to start saving thousands of Pounds a year in pallet costs and pallet wood purchases, contact us for a tailor-made offer!
