June 2012

Cekamon Saws Newsletter

This last newsletter before the summer includes i.e.:

- [Unique solution for limited space](#)
- [Dust extraction of main importance](#)
- [Dismantling with reciprocating machines](#)

The Cekamon Saws team wishes you a nice summer.

>> Cekamon Saws in Iceland

Again we stretched our boundaries. Last month we visited Iceland for the installation of a repair line. Now our customer takes a leading position in Iceland's pallet repair business.

>> Update Automation

As you might have noticed in our previous newsletters, automation of processes has our full attention. Different parts of the process are, at this in a test phase. For one of these tests we recently ordered a used Robot in an excellent condition. Used machinery could be a perfect option. For used machinery please look on www.cekamonsaws.nl.

>> Unique solution for limited space

For every issue there is a solution. De With Pallets situated in Zeewolde (Netherlands) needed, due production expansion, to size down its repair department. Although the repair of pallets didn't decrease. Together with De With Pallets we develop a vertical repair line with a vertical pallet supply to the workstations. Prepared (Euro) pallets now passed over top the workbenches in a vertical position.

Once they arrive at the workbench, they easily can be pulled over on the table. After being repaired the pallets are transported by a chain conveyor to the PalletStacker. This chain conveyor is positioned under the workbench. With this solution we saved more then 40m² on space and the heavy (Euro) pallets are hardly lifted anymore.

Are you interested in this solution, please don't hesitate to contact us..

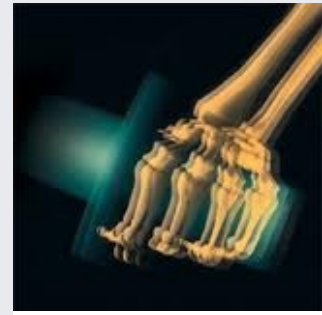

>> Dismantling pallets with reciprocating machines

Dismantling pallets with reciprocating machine such as a Flex skd 2902 is common use in the pallet industries. But it can lead to an overload of body parts (i.e. Arm). Therefore there are European health en safety regulations for the use of machines that cause hand and arm vibrations. According to these regulations an employee is only authorised to use the mentioned Flex for a maximum of half an hour a day. Even the Makita 70 AVT (Anti Vibration Technique) can, according to these regulations, only be used for 2,5 hours a day.

To reduce vibrations on hand and arm, [Cekamon Saws PalletSaw](#) offers a solution. The PalletSaw can remove broken parts from pallets. After taking off the broken parts the pallets can be repaired. With the PalletSaw you're sure your employees work according the safety regulations.

Curious how long you can work with your type reciprocating machine? [Use the arm vibration calculator.](#)

>> Exhaust

This spring, there was a huge fire in a silo with saw-dust in a Dutch town called Rijssen. Although the silo was not located in the companies building, the damage was enormous. The cause of the fire was probably in the exhauster.

Could this happen to you? Cekamon Saws supplies an exhausters, with an integrated fire extinguisher, that complies with the most stringent requirements for optimal working conditions.

>> Green Deals

The Dutch Packaging and Pallet Industry Association (EPV) and the Dutch wood platform (PHN) have signed a green deal with the Dutch government. With this agreement the parties stimulate the burning over residual wood by the production of wooden pallets.

Cekamon Saws welcomes such initiative. However, this green deal isn't applicable on used pallets. For these broken pallets, Cekamon Saws has the solution. Since 1993 you can recycle unusable pallets to usable boards and blocks. This is what we call a win/win situation, because it profits you as well as the environment.

For more information about the benefits of wooden packaging visit: www.packagingfromnature.com.
