New machines for the repair and production of pallets

To be able to answer market questions **Cekamon Saws BV** is constantly seeking for answers for its customers/relations. In our newsletter you read that we developed new machines or improved existing ones. This we did with just one goal; simplify the repair of pallets and make it more cost-efficient. Please find hereby the improvements we made to existing machines and the developments of new machines

Board chamfer machine

Easy chamfer your board with the **Cekamon Board chamfer machine**. Cekamon Saws BV offers you a board chamfer machine cheaper than the most common machines on the market. Convince yourself and ask for more information or a quote. [Click here](#)

Align machine for Düsseldorf Pallets

As from now **Cekamon Saws BV** has a machine in its range that not only aligns the corners of the Düsseldorf Pallets but also brings back the original profile of the corner. Therefore these pallets will regain more of their original strength

Leg machine

To be able to produce your own pallet legs, **Cekamon Saws BV** developed a **leg machine**. With this machine you are able to produce your desired size of legs fast and easy. If a leg machine is too complicated (i.e. you only use 1 size of legs) we can deliver an **iron template**. This template offers the possibility to produce your legs by hand. Such a template is easy to use while repairing pallets. For information and quotation. [Click here](#)

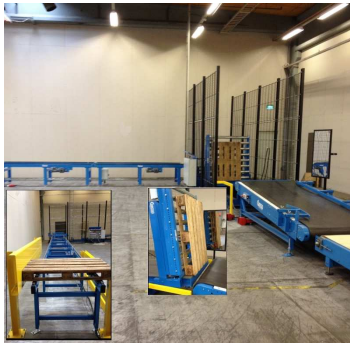

Loaded for Finland

For a pallet pool owner in Finland we recently despatched several parts of a sorting line. These parts will be part of an extension of an existing robot sorting line. For this extension **Cekamon Saws BV** delivered a Pallet Tipper and a logistic system giving our customer a capacity of 400 pallets per hour. In this same project **Cekamon Saws BV** connected the pallet repair to the sorting process. As a result our customer does not have any forklift movements between the sorting and the repair of its pallets anymore.

Current situation in Finland

At our last visit to Finland we installed the delivered

equipment as mentioned before. As from now the intended 400 pallets per hour can be achieved. Everything is functioning fine and to full satisfaction of the customer. Our customer was more than pleased with our expert advices.

Are you also looking for solutions to your problems? Do not hesitate to ask us. [Click here](#)

Response of a customer

Reacting on our question how his PalletSaw W, which he purchased a couple of years ago, a customer reacted:

- You guys make your machine way to good, nearly nothing breaks down. I'm very satisfied about your machine and I'm still very glad that I bought your machine back then.

Increase of wood prices since 2005
