

February 2014 - Year 4 - Nr. 2

Bonfire in Scheveningen (NL)

In Scheveningen (NL) it is a tradition to welcome the New Year with a bonfire. Hundreds of pallets are burned.

We as Cekamon like traditions, however we would like to start 2014 with our own vision:

Recycle before burning.

Recycle before burning:

An article in the leading Dutch journal "Houtwereld" confirms our vision.

We quote from this article:

"Residents of a neighbourhood in the Dutch city Zwolle were not amused when they received their energy bill of a wood heated power plant. In contradiction of promises heating the power plant on wood was more expensive than heating it on gas."

Massive price increase for softwood on stem

Fedustria the Belgium federation for wood industries announces that prices for softwood on stem are raised massively. As a result of this, prices of sawn timber will raise in short term as well.

Reasons given by Fedustria:

- 1) Subsidized burning of Biomass
- 2) Eager for raw materials in rising economies
- 3) Growth of the American construction industry

Cekamons view:

Sort your pallets, then (if possible) **repair** them. If you can't repair them only then **dismantle** them. Re-use the wood gained from the dismantled pallets in **production** of new pallets. Only burn the wood which is no longer useful.

New Repair and production line delivered

Last December we completed a repair and production line at Paletterie 2000 in Belgium. With this line it is possible to dismantle obsolete pallets. The usable boards out of these pallets are directly re-used in the production of new pallets. With the other part of this line Euro pallets can be repaired, using a Cekamon PalletSaw for preparing the pallets for repair. After the pallets are prepared they move in a vertical position to 3 workbenches where they are repaired. Once the pallets are repaired, they are transferred to a pallet stacker over a chain conveyor under the workbenches.

Saving space and time are, as well as the fact that employees are no longer walking around with pallets, clear advantages of this line.

Vertical transfer of prepared pallets

New possibilities on the Cekamon [Expert](#) nailing table

To be able too produce extra long pallets Cekamon created and delivered, on request of a several customers, the **Expert XL**.

With the Expert XL it is possible to produce pallets with 12 or even 15 blocks. Producing pallets with a length of 2 or 3 meters is no longer a problem.

Delivery of new Cekamon PalletSaws

Again we delivered a [PalletSaw](#) to new customers in **United Kingdom, Hungary, Czech Republic** and **Iceland**.

These customer also work with our unique PalletSaw.
